

Design & Technology GCSE/NEA Revision half term holidays

Congratulations on a fantastic start to your NEA, we are seeing some outstanding work so far.

Now is the time where we need to push ourselves even harder as there is a long way to go to achieve the grades you are hoping for.

What can you do to prepare for this?

For when you return after the half term it is very important that the following pages are fully completed ready to begin section 2:

- **Design Exploration**
- **Investigating design possibilities**
- **Needed Research**
- **Analyse of Existing Products**
- **Work of Others**
- **Client Needs**
- **Client Interview**

All powerpoints used in lessons for each page have been added to Google Classroom for you to use. I have also added the NEA help sheet which explains what is needed on each page, where marks are awarded and where they are taken away.

When you return after half term sketching will be a priority as we will begin to develop and generate design ideas. We need to harness and develop our techniques to ensure we are getting the top marks.

It will be imperative that you know and understand the following techniques:

- **Two point perspective**
- **Isometric Projection**
- **Orthographic Projection**

In order for you to practise some of these things I have prepared a work pack that you will receive in your class. I will also upload it to google classroom in case you lose it.
